INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(Chapter II of the Patent Cooperation Treaty)

(PCT Article 36 and Rule 70)

Applicant's or agent's WPP92005	file reference	FOR FURTHER A	CTION	See Form PCT/PEA/416		
		International filing date	(day/month/year)	Priority date (day/month/year) 11.08.2003		
International Patent Classification (IPC) or national classification and IPC C08K5/372						
Applicant BRIDGESONE/FIRESTONE NORTH AMERICAN TIRE, LLC						
This report is Authority under	 This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36. 					
2. This REPORT	2. This REPORT consists of a total of 7 sheets, including this cover sheet.					
3. This report is	also accompanied	by ANNEXES, comprisi	ng:			
a. □ sent to	the applicant and	to the International Bure	eau) a total of sheets	, as follows:		
i an						
be	sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box.					
b. (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s)), containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions).						
4. This report con	4. This report contains indications relating to the following items:					
⊠ Box No. I	Basis of the op	inion				
☐ Box No. II	Priority					
☐ Box No. III	Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability			ve step and industrial applicability		
☐ Box No. IV	- ·

see separate sheet

Box No. VII Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

see separate sheet

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

<u>V) Re Item V</u>: Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

V.1) PRIOR ART

Reference is made to the following documents:

D1: DE3501697

D2: US2001051677 (cited by the applicant: family member of US6554037)

D3: EP0943466

V.2) NOVELTY - Art. 33(2) PCT

The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 1-10 is not new in the sense of Article 33(2) PCT.

V.2.1) Claims 1-7

Document D1 discloses a rubber composition which comprises (A)100 parts by weight of a mixture of butadiene-acrylonitrile copolymer with different acrylonitrile content and a terpolymer of ethylene, propylene, and a diene (ethylidenenorbornene or hexa-1,4-diene) and (B)10 parts by weight of a ether-thioether such as Vulkanol 85® as described in example 1.

The obtained covulcanisates are suitable as pipe coverings, conveyor belt coverings, or drive belts (p.5, I.4-5). They show a good resistance to ozone (p.3, I.6; p.5, I.2: p.10, I.6).

Consequently, the subject-matter of claims 1-7 is not new over D1.

V.2.2) Claims 8-9

Document D3 discloses a tire having a rubber composition as an insert in its sidewall region which is comprised of (A)100 parts by weight of diene-based elastomer and (B)0.5 to 10 phr of dithiodipropionic acid (claim 1).

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/US2004/025954

The acid enhances the stiffness of the sulfur vulcanized rubber composition of the insert as well as to endeavor to substantially maintain a relatively low hysteresis ([0019]).

Consequently, the subject-matter of claims 8-9 is not new over D3.

Therefore, only claim 10 is new.

V.3) INVENTIVE STEP - Art. 33(3) PCT

The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 8-10 does not involve an inventive step in the sense of Article 33(3) PCT.

V.3.1) Claims 8-9

Note that if the Applicant amends the claims by specifying in claims 8-9 the nature of the thio-containing surfactant by "ether thioether", claims 8-9 would be new but not inventive. See objection below.

Document D2, regarded as being the closest prior art to the subject-matter of claims 8-9, discloses sidewalls of vehicle tires made from a vulcanized rubber composition comprising (A)an elastomer (100 phr) and (B')a mixture of an alkoxylated alkanol surfactant such as R-O-(C3H6O)x-(C2H4O)y-H (claim 3) (0.3-5 phr) and an alkali metal alkyl-sulfonate or alkyl-sulfate antistatic agent (0.5-10 phr). (B') permits formation of a varnished film on the tire sidewalls upon exposure to ozone which gives a non-stained glossy appearance to the sidewalls ([0011]-[0013]).

The difference between the application and document D2 is the nature of the surfactant (B).

The effect of this difference is not shown by the comparative examples of the application, as there are no comparative examples of a composition containing (A)+(B'). The problem to be solved by the present invention may therefore be regarded as to

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/US2004/025954

provide an alternative vulcanized tire sidewall.

The solution proposed in claims 8-9 of the present application cannot be considered as involving an inventive step (Article 33(3) PCT) for the following reasons:

Document D1 discloses a rubber composition which comprises (A)a rubber and (B)a ether-thioether such as Vulkanol 85® (example 1). The obtained covulcanisates, suitable as pipe coverings, conveyor belt coverings, or drive belts (p.5, I.4-5), show a good resistance to ozone (p.3, I.6; p.5, I.2: p.10, I.6). The skilled man who wants to find an alternative vulcanized tire sidewall, would try different alternatives for the surfactant (B): the surfactant (B') of document D2 is a mixture of 2 compounds, one containing the function alkoxy (C2H4O) and the other containing sulfur, and those 2 functions are contained in the surfactant (B) of document D1, thus the skilled man would apply the surfactant (B) of document D1 instead of (B') in the rubber composition of document D2 without any inventive skills.

Thus the subject-matter of claims 8-9 is not inventive.

V.3.2) Claim 10

The method, for forming a varnished film on the outer surface of the sidewall comprising the vulcanized elastomer composition (A)+(B') exposed to ozone, is known from **document D2** (claim 38; [0066]).

Thus the subject-matter of claim 10 is not inventive.

V.4) Industrial Applicability - Art. 33(4) PCT

Since rubber compositions are important industrial products, industrial applicability can be aknowledged.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/US2004/025954

<u>VII) Re Item VII</u>: Certain defects in the international application

To meet the requirements of Rule 5.1(a)(ii) PCT, documents D1 and D3 should be identified in the description and the relevant background art disclosed therein should be briefly discussed.

<u>VIII)</u> Re Item VIII: Certain observations on the international application: CLARITY - Art.6 PCT

VIII.1) Claims 2 and 3 are unclear: the term "further" implies that the rubber composition of claim 1 comprises an additional component to the thio-containing surfactant of claim 1. But in fact it is the same.

VIII.2) Claims 3 and 7 and description p.5, I.27 are unclear: "n" used in the formula, is not defined.

VIII.3) Claims 1 and 9 are unclear: claim 1 uses "thio" and claim 9 uses "sulfur" ("sulfur" is more general than "thio") to define the same component.
